Get started using cloud.gov

cloud.gov services can only be purchased by federal government agencies. We hope to provide services to state and local agencies in the future. There are a number of different ways to start using cloud.gov.

Purchase cloud.gov for your federal team [↗](#)

If you represent an agency that wants to use cloud.gov services, you can purchase an access package. cloud.gov offers a number of packages, depending on your team's needs. You can compare packages and rates to get a sense of the options. If you're interested in a package for your team, contact us by emailing cloud-gov-inquiries@gsa.gov. We'll contact you to schedule a followup conversation to discuss your team's goals and needs, and how we can help.

cloud.gov services are sold through 18F, a federal digital consultancy housed within the General Service Administration's Technology Transformation Service. 18F sells services to other agencies through the Interagency Agreement ("IAA") process. Currently, processing an IAA takes an average of 6-8 weeks. For background on IAAs, see the Department of the Treasury Interagency Agreement Guide, including "IAAs are not contracts, and therefore do not require CO signature." We will help you navigate each step of the IAA process.

Try a limited-use sandbox account for free [🔗](#)

A sandbox is a free, limited way to try cloud.gov so you can get a sense of how cloud.gov would work for the applications your team builds. Anyone with a U.S. federal government email address can sign up for a sandbox space on their own. [Learn more about sandboxes.](#)

Work with an 18F team

18F teams that are working with agency partners use cloud.gov to develop and deploy applications, and the cost of using cloud.gov is included in the IAA for the entire engagement. If you're interested in full-service delivery of a product or application, contact 18F. For example, Every Kid in a Park (for the Department of the Interior) and College Scorecard (for the Department of Education) were both developed and launched using cloud.gov.

Use cloud.gov as a vendor for a federal government client [↗](#)

cloud.gov can be a building block for vendors and contractors that supply services to federal agencies. If you're part of a vendor or contractor, you can submit proposals to agencies for services to be built on top of cloud.gov.

If you're part of a vendor or contractor that already works with government agencies and you're interested in using cloud.gov, ask your agency partners to evaluate this option.

Setting up a local development environment

This page is primarily for the cloud.gov team. It's public so that you can learn from it. For help using cloud.gov, see the [user docs](#).

This guide is useful for setting up a local development environment for cloud.gov platform operations and includes a number of command-line tools used in the development and maintenance of the cloud.gov system.

This guide assumes you are using a standard GSA-provided Mac OS development asset for specifying commands and packages.

Setting up a local development environment [↗](#)

Pre-install for brand new machines [↗](#)

Install `brew`

Note: If this is a new GSA-provided laptop, it likely does not come with `brew` installed. Install `brew` and other tools via the 18F platform scripts from the 18F laptop repo (or manually if you have strong preferences about the laptop script)

```
bash <(curl -s https://raw.githubusercontent.com/18F/laptop/master/laptop)
```

Vagrant

The bosh-lite repo provides a Vagrantfile and box for quickly standing up a bosh lite director on AWS.

```
brew install vagrant
vagrant plugin install vagrant-aws
```
